

1 **ABSTRACT OF THE DISCLOSURE**

2 An audio player includes a processor, a FM transmitter electrically connected to
3 the processor to transmit low power frequency, a USB interface electrically connected to
4 the processor for connection with other appliance, a controller electrically connected to
5 the processor and having at least one key to correspond to and control options in the
6 processor, a display electrically connected to the processor to display the selected option
7 in the processor by the controller, a storage electrically connected to the processor to
8 store information therein, a decoder electrically connected to the processor to decode
9 digital audio information so that the digital audio information is converted to digital
10 information and an analog/digital converter electrically connected to the decoder to
11 convert the decoded digital information to audio signal to enable other appliance to
12 properly play the audio signal directly.
